Dear new RI NCP,

Welcome!

Whether you are an experienced NCP switching over from another field or a newcomer to the field of research infrastructures (RI, including e-infrastructure) or even EU research funding – the idea of this „welcome package“ is to provide you with a selection of highly useful documents, presentations, and links to help you get started in your daily job as an RI NCP under Horizon 2020. It is not a narrative on how the programme works. If this is what you are looking for, we cannot spare you having to read the linked documents to find out.

If you count yourself among the NCP novices, here’s some hints on how to familiarize yourself with your new job and its context.

- NCP Guiding Principles and Minimum Standards (agreed upon by the EC and member states).
- Introduction to Horizon 2020 by the EC featuring lots of materials, publications, FAQs etc.
- Glossary on Horizon 2020 terminology.
- EC websites on Research Infrastructures in Horizon 2020:

- The current RI Work Programme, featuring all calls (including budget, opening dates & deadlines), introduction and rationale, relevant instruments and approaches.

CIRCABC and confidentiality

As an officially nominated NCP, you should have received confirmation of your nomination by the EC once your details have been passed on by your national government. At about the same time, you or your national NCP coordinator should be given access to CIRCABC, the relevant web-based storage space for documents such as call results. To begin with, you must obtain an individual EU Login (former ECAS account). The information you will be given access to may depend for example on whether you are also a member (expert) of the RI programme committee and how the NCP landscape is structured in your country.

The configuration “Research Infrastructures” of the Programme Committee, is the relevant political body deciding on the implementation of the Research Infrastructures part in Horizon 2020. Its members are delegates from the member states and the associated countries (ministerial level), sometimes their accompanying experts, and the EC. For an introduction to the rules of procedure of the EC in its interaction with the member states, please refer to the EC’s website, particularly a section on “comitology”.

Authors: Nadine Heller-Genath, René Siffrin, Andrea Hesse, German Aerospace Center (DLR) for the RICH Network, Last Update: March 2020
If you personally have no access to call results, liaise with your national NCP coordinator. He or she should make these results accessible to you or in turn get in contact with the EC. In any case, all NCPs should eventually be able to view the call results in their specific field. This is highly sensitive material. You are aware you will know more than your clients (applicants will only receive their Evaluation Summary Report (ESR)), and you must not share the lists with anyone. Clients approaching you to find out how they are ranked once they have received their ESR and score may be given their position on the ranked list, but not the acronyms or other data of other proposals. Your clients depend on you to treat their proposals, including drafts sent to you before submission for general feedback, with equal confidentiality.

**Your ultimate gateway: The Funding & tender Portal**

The most relevant website for the implementation of Horizon 2020 by far is the Funding & tender Portal. You will find all calls, documents, guidance material and the electronic submission service here. In the “reference documents” section, the EC will also post standard templates for RI calls when they differ from other templates for RIA, CSA etc.

The Horizon 2020 online manual provides help using the funding & tenders portal. There are numerous Power Point presentations by the EC available online on how to use the portal. Below you find one example presentation. A separate PDF is also available as part of the document collection of this package and in the FAQ section of the funding & tenders portal.

The new dashboard provides data on H2020 projects and participations according to a personal selection of criteria. A “Quick Guide” on the dashboard may help to find out how to make use of it. Horizon 2020 project information and now also report summaries are available on CORDIS. Detailed information for publication on all funded H2020 projects (like title, abstract, beneficiaries and amount of funding etc.) can be downloaded from the EU Open Data Portal.

---

Model Grant Agreement and Online Manual

For many issues including legal and financial questions we recommend checking the Annotated Model Grant Agreement (MGA) as well as (with a broader range) the Online Manual. Both are to be found on the Funding and Tenders Portal. We do not recommend trying to print either of these, as they are huge compilations and, as “living documents,” constant subject to change. The Annotated Model Grant Agreement is a very long paper in PDF format, and it is much easier to work with text search to find a relevant term or section.

Looking back to RI in FP7

As projects from H2020’s predecessor, the 7th Framework Programme on Research and Development (FP7), are still running, you may find yourself confronted with questions on RI projects under FP7. All funded projects (reaching back to FP5!) are listed on the CORDIS server of the EC. Please refer to the Commission’s archived website section and also have a look at the EC presentation for differences for RI between FP7 and Horizon 2020. A main novelty is that RI funding no longer features the unique project type “CP-CSA” but only the standard instruments such as Research and Innovation Action, Coordination and Support Action, etc.

A word on Transnational access (TA)

Transnational Access is a central feature in many RI calls, namely under the “Integrating Activities”. It is also an aspect giving rise to many of the most challenging questions for RI NCPs. Especially the calculation of unit cost leads to many questions. A current EC decision referring to unit costs for actions involving virtual access to RI can be found here. For TA details and specifications, please see the Commission presentation “Access to RI under H2020” by Lorenza Saracco. TA is also an aspect dealt with and illustrated well in the Annotated Model Grant Agreement (1.2 “Specific cost category – access costs for providing trans-national access to research infrastructure”). As a specific feature of TA, you may also want to familiarise yourself with the concept of virtual access, which is also explained in the MGA.

ESFRI

ESFRI (European Strategy Forum on Research Infrastructures) is a member state forum where delegates gather the needs of Europe for new pan-European Research Infrastructures or major updates of them and observe the implementation of the relevant projects. The H2020 RI NCPs are not mandated to be “ESFRI NCPs”, but you may encounter occasional questions on ESFRI by your national communities. You should be aware of the existence of the ESFRI Roadmap, but you cannot be expected to be familiar with internal ESFRI or individual projects’ procedures, or the fine
(political) details of national funding going into these projects. However, you should be familiar with some issues, such as the timings of the roadmap revisions or the eligibility under the “INFRADEV” topics. We recommend you regularly visit the ESFRI website. As we always see calls in the RI work programme specifically or also addressing ESFRI projects, we are, of course expected to know the details of these calls and their conditions.

ERIC

Again, RI NCPs do not have a mandate to serve as contact points for RI consortia considering or pursuing this legal form. However, we should be familiar with the term and its implications, and we should be able to point to the relevant website and documents. The last version of the „ERIC practical guidelines“ was released by the EC in May 2015. It is available for download through the link above. ERIC is a legal entity form created specifically for large, pan-European Research Infrastructures. ERICs (European Research Infrastructure Consortium) have some prime benefits like tax exemptions to help best utilize the funding they receive.

Contact with the EC

The relevant unit in the European Commission dealing with our area of H2020 can be reached by the mail address RTD-RIC-SECRETARIAT@ec.europa.eu. Please note that this address is not a helpdesk for your clients, but you may use it yourself, if you have specific questions relating to a call or the procedures in a particular call, and your question cannot be answered by a more general helpdesk or a colleague. You are probably aware the RI part in H2020 is shared by DG RTD and DG CONNECT.

RICH and your RI NCP colleagues

This package was produced by your friendly European RI NCP colleagues as a deliverable in the EC-funded project “RICH”. It is part of the RICH website, and we intend to update it regularly. RICH is a network designed for capacity building of RI NCPs. Therefore you are welcome to make use of the RICH resources, attend RICH trainings, triplings, and other events. You may also contact individual colleagues for advice and guidance, if you encounter questions you feel unable to handle. However, please note that each NCP has a mandate to serve their national communities and as such cannot take over clients from other countries directly or indirectly (that is why we are National Contact Points after all).

RICH has a history of previously funded network projects, having generated remarkable output in terms of best practice, interesting events, and useful documents. Many experienced NCPs were involved in these earlier projects. We are a diverse bunch with varying levels of experience and all sorts of backgrounds. Many of us serve as NCPs for several fields at the same time. You may want to
take a look at RICH’s predecessor’s website EuroRIsNet to get an impression of what we have been up to. Please note, however, that for example the FAQ collection relates to specific FP7 issues, many of which are no longer valid under Horizon 2020.

This package will be expanded as new documents and presentations become available. The included links however should guide you to most of what you need to know to get started (and to continue a good part on the way). The rest will come in due time with experience and exchange with your colleagues.

Again, welcome, and good luck ☺!
